

# **Smart Waste Management in Meteropolitan Cities**

## **Problem Statement**

A big challenge in the urban cities is solid waste management. The garbage collecting authority intraditional waste management system doesn't know about the level of garbage in dustbin, if the dust bins gets full by garbage then it gets overflowed as well as spelled out from the dustbin leading to unhygienic condition in cities. People throw garbage on that dustbin which is already overflowed. Sometimes due to unclean garbage bins badsmell arises also toxic and unhygienic gases are produced which is way to support to the air pollution and to someharmful diseases which are easily spreadable. It is very bad look of the city. Use of traditional system result ininefficient and time and money spending system.
